The First National Conference on The Bigu -without food- Manifestation, Health Effects and Scientific Research of Yan Xin Qigong

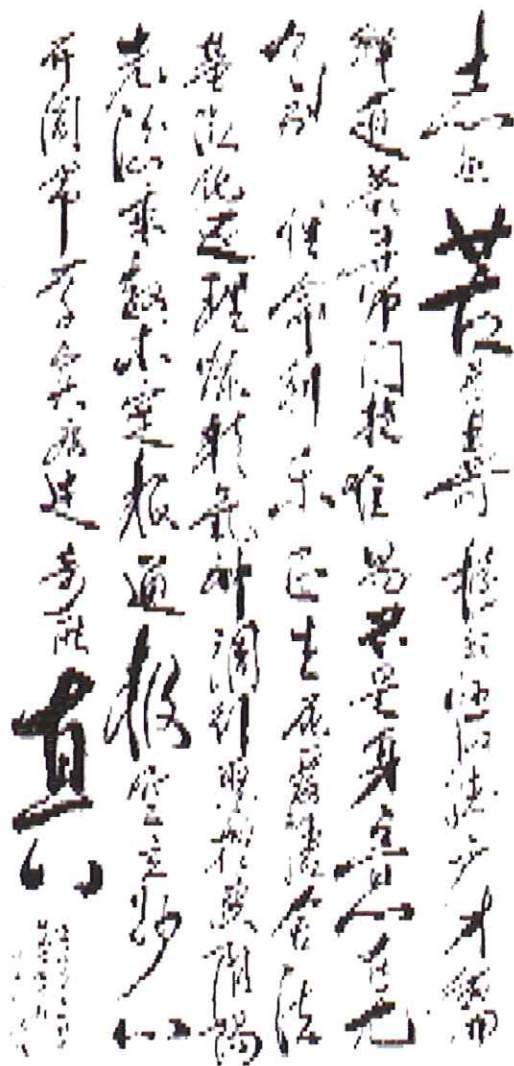

Scope of This Meeting

The shared goal of the sponsors of this program is to advance the cause of Integrative Medicine in the world by educating the public on the remarkable factual scientific base behind much traditional healing. The purpose of this meeting is to focus on one of the most remarkable and visible and measurable set phenomena stimulated by a traditional process.

The Bigu phenomenon, which occurs spontaneously among certain Qigong practitioners, entails the cessation of eating solid food for periods of weeks to months and years. It is so spectacular a claim (but made openly albeit quietly) that it is truly remarkable that no seminar, scientific and technical magazines have published anything whatsoever, on this phenomenon.

We have assembled a remarkable Team of Qigong practitioners, persons in the Bigu state (including families) and world-class scientists who are open-minded to the potential on the new science. The goals of this meeting include:

- The presentation of data, partly in person as direct case studies on the nature of and the process of attaining the Bigu state and the length of its persistence.
- The presentation of data on experimental research to try to explain the Bigu state.
- The presentation of experimental scientific instrumentally obtained data from Yan Xin Qigong and other integrative medicine modalities, which extend the range of very significant facts and useful healing techniques not explained (possibly not explainable) by today's reductionist science.
- Reflections upon the data and hypotheses to explain them, and suggestions for the most important research directions.
- Suggestions for collaboration among different alternative health modalities to establish the collective posture as equal partners to Western medicine.
